Global and long-term effects of nitrogen on ecosystems

N^{eco}School

International Training School on the effects of Nitrogen on Air Quality, Ecosystems and Biodiversity

15 – 26 May 2017 | Faculdade de Ciências - Universidade de Lisboa - Portugal

> under the WAGES concept: nitrogen threats to Water, Air, Greenhouse gases balances, Ecosystems and Soils

> focus on the assessment of nitrogen issues related with biodiversity and air

> linking science to practice and research to environmental management needs

> theoretical lectures, laboratory work and four days of field work

> field work based on international examples and LTsER_{montado} experience

> open to PhD students and early career postdoctoral researchers and to all professionals interested in nitrogen issues; attendees from FCUL (Faculdade de Ciências da Universidade de Lisboa) and ISA (Instituto Superior de Agronomia) will benefit from fee exemption (funded by H2020 NitroPortugal project)
